

PB32

Beavertail plant body is renowned for its longevity and build quality.

The PB32 are subject to dynamic loading and high point loads. King plant bodies have many of the features of King plant trailers, all designed to cope with this on a daily basis and provide long trouble-free life.

KEY FEATURES

DECK

The King low profile plant body is constructed from high yield steel, giving a light body without comprising the strength required. Main beams of the subframe are pierced during preparation /cutting and each cross member is threaded through the beams and welded. Body length is fully dependant on truck chassis.

Fitted with 29mm hardwood. Fitted with 8 pairs of shackles underneath of sideraves. The rear of the truck chassis is shaped to form a beavertail. The beavertail is manufactured in line with the main body

RAMPS

2.5m long x 1.00m wide hydraulic ramps off the beavertail are standard fitment, all steel construction covered in 29mm hardwood.
